IMPRINT

DESIGNED AND
ENGINEERED IN
HAMBURG

STEVENS HAMBURG

DOWN TO EARTH YET COSMOPOLITAN

Being Hanseatic basically means to be down to earth yet cosmopolitan. Reliable yet daring. Understated demeanor and deeply convinced of liberty of mind and action. Hamburg inspires. To repeatedly question oneself and to endeavor to improve on every detail is part of everyday life here. These are the best conditions to build lightweight sporty bikes of the highest quality. Here at STEVENS we have been living and experiencing this every day for the last 25 years

SYSTEMATIC CONSTRUCTION

To develop a bike from first concept to functioning prototype to series production demands clearly structured work processes. It takes a team effort to get the job done. We rely on an incredible amount of people, from testers such as professional cyclists to engineers as well as customers like you, to contribute their knowledge, their thoughts on how to improve on a product as well as what they'd like to see down the line. Countless ideas are collected for every new bike project. Each and every one is addressed – either approved, discarded or improved upon step by step before rigorous testing can begin. We then build every bike in our in-house laboratories using cutting edge software and state-of-the-art machinery. All of this magic happens in Hamburg. This is why “designed and engineered in Hamburg” is printed on all of our bicycles.

STRAIGHT FORWARD TALK

Everyone who bears any responsibility at STEVENS lives and works in Hamburg. It is here where we come together each day to discuss everything. Feedback from professionals, who push our bikes to the limits on and off-road. Opinions of dealers, who contribute their own knowledge and their customers' experience. Reports of in-house quality management as well as everything that is written by the press on our products.

BUILT ON SITE

“Completely designed and assembled in Germany”. A commitment to quality that we live and breathe. From the developers' offices, it is only a few steps downstairs to our STEVENS factory. Our high-end bikes are made literally before our eyes. The process of turning an idea into a real product can be witnessed and monitored at any stage. It is perceptible, comprehensible, and always exciting! And as a result, a two-wheeled reality emerges that can aptly be described as “joy of riding”.

RESEARCH & DEVELOPMENT

WITH MAX RELIABILITY AND FUN IN MIND

Curiosity is the basic prerequisite. To continuously seek a better solution, more refined specs, the bicycle of the future. To demand that the bike be light and sporty, comfortable and durable and worth every cent. To continuously question and optimize working concepts and technologies for maximum quality of material and riding characteristics at each target price. This is why our lights turn on every morning for the last 25 years – and often go out late at night.

PERFECTLY EQUIPPED

A product is only as good as the conditions under which it is made. This is why our developers have everything they need at their fingertips - from state-of-the-art hardware to cutting edge software. Machines and test benches. Choice of material and lab equipment. Our developers are also given ample time for extensive test rides as well as the freedom to rethink the most solidly proven methods so we stay one step above the competition.

NEVER STOP!

There can only be one motto for somebody having their roots in cycling like we do: Keep going until you have reached the finish line – and ideally you are the first to reach it. We test in-house and work with state-of-the-art hardware and software. To make sure the results are perfect. At least until we start to question our ideas again and improve some details – according to our guiding principle: “Never stop”. That this attention to detail makes perfect sense has shown for over 25 years in numerous awards in magazine tests, in satisfied dealers and in loyal customers.

PERFECT PARTNERS

Shared know-how is worth exponentially more. That's why STEVENS engineers work in cooperation with certified specialists and trusted partners. They are constantly in search of establishing and fostering contacts for collaborations on creative innovations. Even the tiniest of these innovations can make a world of difference to the rider. One such innovation is a pannier rack that was created in cooperation with the experts at Tubus. This rack is supported by the bicycle frame, while the struts are hidden below the fender for both a clean look and a stable ride. The goal of our collaboration with Buch+Müller is yet another example. Together we created a head light that blends in perfectly with the suspension fork. In cooperation with SR Suntour, we introduced thru-axes in the suspension forks of our pedelecs and disc brake bikes for added stiffness and safety. There are, of course, innovations that we create fully in-house if existing products do not meet our high quality demands. For our rigid aluminum forks, we developed our own form-fitting mounting bracket that is held securely in place by two bolts to prevent twisting. Our adjustable dropouts securely hold the rear wheel in position on hub-geared bikes.

QUALITY CONTROL

CONSISTENCY AND INDEPENDENCE

There are two characteristics that STEVENS bikes are known for – lightweight and extremely durable. We'll let you in on a little secret – we succeed in combining these seemingly opposing characteristics by developing, then testing, testing and more testing. And the testing continues well past the final phase where our engineers are applying their finishing touches to their masterpieces, straight through to serial production. We continuously monitor our stock production to ensure that it remains at the same high quality level as our prototype. This is why we do not separate development from production, as it is all part of the same continuous process. This is also why our designers are personally involved in and responsible for the assurance of quality in serial production.

INDEPENDENT EXPERTISE

We may be our own harshest critics, but just to be sure we call on outside help when it comes to quality control. We rely on certified engineer Dirk Zedler from “Zedler Institute for Bicycle Technology and Safety”. He is publicly appointed, a sworn bicycle expert and an esteemed consultant of the bicycle sector for decades.

Thanks to his support we are perfectly clear on our STEVENS products' quality levels. Not only does he test our individual products like frames (both carbon fiber and aluminum models), forks, seatposts, and wheels but also tests them in the exact combination that they are assembled on each of our bike models. By knowing our numbers, we can be both light and durable at the same time.

SELF AWARENESS

STEVENS employees are experts in their jobs as most of them are avid cyclists themselves. The cycling levels of our employees range from grocery shopping with a kid's trailer in tow, to avid cyclists at the competitive level. We even have an in-house masters cyclocross World Champion. It surely helps our development engineers to have direct access to colleague feedback, that's often shared over lunch on a daily basis. The environment at STEVENS is a warm, open one where we can easily share stories of our rides and experiences with each other.

HAND IN HAND

LOCATION GERMANY

We confidently stand behind our first class suppliers from all over the world. Yet we claim that the biggest part of STEVENS bikes' added value is that they are created in Germany. More than 60% of our bikes are assembled in Germany, and at least 85% within the European Union. We assemble all STEVENS wheels ourselves. We have installed a successful Custom Bike Program that makes us market leader in customized racing bikes and cyclo-cross bikes in Germany - "Made in Hamburg", of course.

SHORT SUPPLY CHAINS

If a Hanseatic citizen has come to like someone, he or she becomes a member of the extended family. Long-term, trusted partnerships are very important to us. Many of our suppliers are business partners that produce in Germany.

For instance, the innovative lighting for our city and trekking bikes comes from Busch + Müller located in Meinerzhagen, in the Sauerland region. From the town of Sundern, also in Sauerland, we get our SKS mudguards. And Pinion, located in Denkendorf, Germany, provides us with innovative 18-speed and 9-speed gearboxes that are real milestones on the path to a longer-lasting bicycle. The legendary Speedhub, a transmission hub that will get you to the end of the world if you want to go there, is made by Rohloff in Kassel. And our pedelecs get their smooth, strong power from motors made by Bosch whose main office is located in Gerlingen.

CUSTOMER PROXIMITY

For twelve months a year, we travel on German and European roads, trails and cycling paths. We rely on a network of 600 specialist retailers in Germany alone, all of whom are ahead of their competition by more than a wheel length in terms of competence and service. We maintain relations with countless loyal customers from whom we've received varied and valuable feedback...well before the advent of social media.

This is how we are acutely aware of the requirements as well as the demands of the highly discerning German bicycle market. With this knowledge we can deliver on their wishes. By hitting the nail on the head, we get to enjoy frequent approval ratings on readers' brand preferences in national magazines.

TECHNOLOGY

SMART SOLUTIONS

Why do STEVENS all-round bikes set the gold standard in every price category in terms of light weight and responsive handling? Why do convinced customers, loyal dealers, and trade press express their appraisal in numerous test wins time and time again? Because our engineers do everything they can to find the best and literally most reasonably priced solutions for all the requirements a bike has to fulfil. This includes requirements for everyday use to extreme situations – be it riding to work, fast-paced fitness training or bike-touring to the North Pole. You don't need to know what "Aluminium Superlite 6061 Triple Butted" means or how an 18-speed internal gear box works. But you can experience it while riding.

1

SELECTIVE STIFFNESS

Whenever you see features like "tapered headtube" and "tapered steerer" you can gladly look forward to experiencing maximum steering precision with minimum weight. The upper headset bearing measures 1.125", and the lower a more sturdy 1.5" in diameter. Frame and fork shaft are stiffest where the highest loads occur.

2

ELEGANT SOLUTION

The attachment of the pannier rack is invisibly integrated into the fender. STEVENS designers wanted it and our Partners at Racktime and SKS Germany made it happen. Tip: When you remove the spacer under the cross strut, you can fit comfortable 47mm tires.

3

FLYING THE FLAG

Did we already mention that we are a little proud of the Hanseatic origin of our bikes? Here the proof is prominently displayed on the saddle. Read more about this in the first pages of this catalogue.

4

FOUR IN ONE

This dropout embodies a lot of development work. It smartly combines four important functions. Rear wheel alignment. Highly precise braking. Almost invisible yet very stable eyelets for a kickstand. And an elegant transition into the pannier rack struts, designed in collaboration with our supplier Racktime. We take some pride in claiming that no other competitor pays so much attention to detail. But of course you knew that already.

TECHNOLOGY

CAPABLE PARTNERS

When it comes to your safety and unrestricted suitability for everyday use, we only trust the best suppliers – from the lightweight aluminium fork to the supplemental reflectors. All our fully-equipped bikes use hub dynamos. In an increasing number of models we are now incorporating hydraulic disc brakes to guarantee the best possible braking in any weather. From the very beginning, we rely on perfectly synchronized SHIMANO components, long-lasting Rohloff or SHIMANO gear hubs, or innovative highlights such as the 18-speed gear box from Pinion with carbon fiber-reinforced drive belt from Gates. If the STEVENS engineers and test riders give their approval on a product, then you can rely on it 100%.

1

LIGHT EQUALS VISION

Our fully-equipped city, trekking and touring bikes provide maximum light via reliable hub dynamos providing electricity for the LED lights. Almost all of them are supplied by market and innovation leader Busch+Müller. The IQ-XS headlight shown here uses IQ technology for best road illumination with 70 lux – one of the benefits for riders of the STEVENS Avantgarde or Super Flight.

2

FORM AND FUNCTION

There simply is no more successful combination of pannier rack and safety lighting system. We, and our demanding customers can give thanks to Racktime and Busch+Müller for this. Note: the big red thing at the back of the bike is not the rear light, but rather a reflector that we are obligated to mount on our bikes.

3

THE MORE THE BETTER

With 636% gear range, the 18-speed gearbox from Pinion outperforms even the most off-road capable MTB derailleurs by far. What does that mean for you? This made-in-Germany gearbox delivers the perfect gear for every situation – from insanely steep climbs like in the Ardennes or other European mid-range mountains to the tailwind-driven final stage of a tour to Lago Maggiore.

4

ATTENTION TO DETAIL

You will also recognize a STEVENS by its small, intricate details we incorporate into every one of our bikes, while other manufacturers are satisfied with standard cookie-cutter solutions. The design-award-winning Oi bell from Knog is one such example. We've had it exclusively manufactured for us in an elegant satin finish. We naturally went with the new, even louder version.

CITY CROSS

8X LITE TOUR
7X TOUR
7X LITE TOUR
6X TOUR

6X LITE TOUR
4X LITE TOUR
CITY FLIGHT LUXE
CITY FLIGHT

Light, swift bikes for city and countryside – these STEVENS virtues are embodied by our City Cross range. Fine aluminum frames stand for understated elegance, but also for an overall weight of less than 13 kilograms for almost our city crossers. Ideal for speeding around town with a sporty feel, or for relaxed touring through the countryside. This package of lightweight frame and perfect engineering turns riding into pure pleasure with the very first pedal stroke.

CITY CROSS

8X LITE TOUR

FEATURES //

1. FULLY EQUIPPED

Even with a total weight of far less than 13 kg the tour biker does not have to relinquish anything. But he may appreciate elegant mudguards and pannier racks.

2. LIGHT LEADER

Why use carbon, if you can do without? The light K1 fork features thru axles and lowrider bosses.

3. PREMIUM PACKAGE

3x10-speed drive train and disc brakes from Shimano's well-proven Deore XT trekking bike groupset.

4. FASTER, FASTER

The new Schwalbe G-One Allround tires are super smooth-running.

STRONGLY SPEC'D

"XT" is the mother of all MTB component groups, it guarantees perfect function in every situation. The trekking version benefits from SHIMANO's decades of off-road experience just as the riders of an 8X Lite Tour whose 3x10-speed drivetrain and disc brakes can take anything that sporty touring or every-day riding can throw at them.

LET THERE BE LIGHT

And lots of it. The IQ-X headlight from BUSCH+Müller is the first to crack the 100Lux barrier. It excels with a wide and far-reaching light cone, first-class close-range illumination and automatic daytime running light.

STRONG DESIGN

Top and down tube are securely fixed to the extra-stiff tapered head tube. Shift cables and brakes lines are routed internally – all for the sake of nimble handling, tidy appearance and reduced maintenance.

SMOOTHER AND FASTER

These many little, round rubber knobs make the G-One Allround tire roll effortlessly over tarmac and hard-pack roads. Even on gravel, the rider of an 8X Lite Tour does not need to slow down since Schwalbe designed this tire as a “gravel racer” dedicated to this kind of surface and type of bike respectively. In the US, special races are held for gravel bikes. Some of these events are several stages long and take the riders over extreme terrain. At only 380 grams, it is also astonishingly light.

8X LITE TOUR

- › Superior sports tourer with top-notch specs at only 12.5 kg (28 lbs)!
- › New Shimano Deore XT T8000: drivetrain and disc brakes
- › Super-light K1 aluminum fork w/ tapered steerer and thru-axle
- › Busch + Müller Lumotec IQ headlight w/ 100 lux high beam
- › Internal cable routing

POSH CRANKS

This SHIMANO crankset is the only one suitable for our minimalistic, stylish City Flight – with stylish piano lacquer finish, incorporating current Hollow-tech II technology. Thanks to the elegant chain guard, you'll even be able to ride your bike to the opera without sully your tuxedo or evening gown.

SMALL BUT BRIGHT

What you see here in a close-up is the smallest and lightest dynamo-powered street-legal rear light made in Germany. A system of clear-glass lenses spreads the light from a high-power LED into a very bright red beam. For riding through the city at night, there is an additional stationary light function. Yet another detail that sets us apart from other bikes.

CITY FLIGHT

- › City sportster with touring kit - fit for everyday use

URBAN

STRADA 1000

STRADA 900

STRADA 800

STRADA 600

You want to ride around the city fast and in style? Then "Strada" has to be printed on the bike's frame – minimalistic machines that combine the latest road and mountain bike technology.

URBAN

STRADA 1000

FEATURES //

1. FINE SPEEDSTER

Thanks to full carbon fork and delicate mix of components Strada 1000 Disc only weighs 8.6 kg. Pure understatement, at least as long as it stands still.

2. POWER DRIVE

Completely new Shimano Ultegra 2x11-speed drive train with compact cranks – No wonder so many road cyclists will only see its rear wheel ...

3. SPECIAL HANDLEBAR

Strada model series combines road bike technology with flatbar functionality - the best of both road cycling and mountain bike worlds, so to speak.

4. FAST ROLLER

Continental Grand-Prix-Urban tires on a DT Swiss wheelset makes you lust for more. More Speed to be exact.

URBAN SPORTSTER

When a bike needs to be as fast as our Strada Disc 1000, then only the “Grand Prix” tires from Continental can be considered – the undisputed benchmark for road bike tires. This bike sports the 35mm wide Urban version with “Black Chili” rubber compound and black reflective sidewalls.

POWERFUL BRAKES

When a bike is as fast as our Strada 1000 Disc, only the most modern technology, namely flat mount disc brakes, qualify to provide the rider with 100% control and confidence. We rely on our top supplier SHIMANO so that we are sure our customers are in good hands.

STRADA 1000

- › Lightweight and fast city racer w/ classy anodized finish – just 8.6 kg (20 lbs) overall weight
- › Full carbon fork w/ tapered steerer and thru-axle
- › Completely new Shimano Ultegra 2x11-speed drivetrain

STEVENS cross bikes combine the best of trekking and mountain bike technology. They are created for the asphalt jungle as well as for exploring unpaved roads. The geometry of these light, elegant yet sturdy aluminum frames is the perfect mix of comfort and sporty. Most models are equipped with a shock-absorbing suspension fork and strong disc brakes. All weigh less than 13 kilograms, have derailleur systems and knobby tires. If you are looking for a versatile bike, these sporty yet elegant all-rounders for women and men are made just for you.

X CROSS

8X

FEATURES //

1. LIGHTWEIGHT AND STIFF

This is what aluminum in perfect shape looks like – tapered head tube and delicately welded.

2. SPORTY, SPORTY

The nimble steering geometry meets a sporty yet comfortable sitting position.

3. FULL CONTROL

SR Suntour's oil/air suspension fork and Shimano's Deore XT disc brakes keep everything under control.

4. ALWAYS FORWARD

Shimano Deore XT 3x10-speed drive train always gives you the right gear for every kind of ride situation – be it on a steep uphill ramp or full-throttle ahead.

JACK OF ALL TRADES

With its tightly packed center knobs, the Schwalbe Smart Sam tire effortlessly rolls over tarmac and fast gravel roads. As soon as the surface becomes loose, the knobs on the shoulder of the tires dig deep into the ground to allow for amazingly high cornering speed. Tip: When you leave the paved road for the forest trails, a lower pressure in the 42mm wide tires is beneficial – 3.5bars (51psi) will be enough.

FULL RANGE

Shimano Deore XT enjoys a good reputation amongst mountain bike riders. Its trekking version with triple chainring in front and 10 cogs at the rear offers the maximal gear ratio for every kind of riding situation.

8X

TREKKING PREMIUM

P18 LITE
SOVEREIGN
AVANTGARDE

ESPRIT
RANDONNEUR DISC
RANDONNEUR

If you like touring, you will love Trekking Premium models. Wonderfully light bikes with state-of-the-art technology including hydraulic disc brakes and high-end light systems. Refined, compact frames with high lateral stiffness. Top technology from Rohloff hub to Shimano XT gearset and Pinion drive. These incredibly reliable bikes have everything needed to achieve superior riding characteristics while on tour – go ahead and cross national borders.

TREKKING PREMIUM

SOVEREIGN

FEATURES //

1. 100% HARMONY

Already from the first pedal stroke Sovereign riders feel how elaborate this bike is - and how successful the balance between sporty and comfortable sitting position can be.

2. STRONG BRAKES

They are called Deore XT and keep the boldest mountain bikers under control.

3. BEST FRIENDS

Rohloff Speedhub and Gates Carbon Drive unite to provide for a maximum smooth drive.

4. TYPICALLY STEVENS

Pannier rack and rear light cannot be integrated more elegantly into the overall concept.

KEEP ON RUNNING

There are Speedhubs out there with a service life of over 100,000km. Tens of thousands of frequent and long-distance cyclists who will never use another type of shifting again. And 14 gears cannot be shifted more reliably than with this clever design from Germany's super-tinkerer Bernd Rohloff. Maintenance requirements? Maybe an oil change once a year. Only the carbon-reinforced Gates drive belt requires less.

LIGHT AND MORE

The attribute "superior" also applies to lights. Via a handlebar-mounted switch, the riders can control the super-bright Busch+Müller Luxos U headlamp and its various functions like floodlight, daytime running light and even signal-flash light. The "U" stand for the USB port that you can use to charge your phone or GPS device as long as you push the pedals hard enough.

IN ONE PIECE

Our engineers take rightful pride in this show-piece made from aluminium. The exclusive K1 Superlite fork seamlessly continues the elegant lines of the P18 frame. The wire connecting the dynamo with the head lamp is naturally routed inside the fork leg. There are also lowrider eyelets, just in case the travel bug bites you.

SMALL POWERHOUSE

While a bottom bracket shell normally houses the bottom bracket only, with the P18 the shell also houses a complete control center that provides the rider with 18 finely stepped gears. When riding, be sure to pay attention to how its perfect weight-distribution positively affects handling. What you don't need to pay attention to is the carbon fiber-reinforced drive belt – even without any lubrication or other maintenance work, it will last forever.

P18 LITE

- › Modern sports trekking bike with premium full specs
- › Finely tuned 18-speed Pinion gearbox with 636% gear range
- › Innovative, low-maintenance Gates belt drive

STEVENS Trekking models are superior all-rounders. Spec'd with robust pannier rack, effective mudguards and modern LED light system. With the demands of everyday riders solidly met, it is smooth sailing – even when the weather turns sour. Perfect for those who do their shopping on the bike or want to be solidly prepared for a bike tour that runs well into the night hours. With a seated position as relaxed as this, you will never want to get off the saddle again. And you don't have to, as these trekking models are made to go the distance! They offer lightweight components of the highest quality and functionality in any price category. We design and equip them to emphasize what's most important to us – the pleasure of riding.

TREKKING

PRIMERA DISC

FEATURES //

1. LIGHT FRAMEWORK

The perfectly created aluminum frame with tube profiles adjusted for applied loads and in Forma version with low step-through.

2. STRONG GUIDANCE

Suspension fork with 30 millimeter stanchion tubes, oil shock absorber and lockout, optimized for use with disc brakes.

3. RELIABLE PARTNERS

Shimano's Deore 3x10-speed group-set and reliable hydraulic disc brakes.

4. HANDY ACCESSORIES

A functional complete set-up – from Dynamo hub to pannier rack system and rear stand light.

METICULOUS WELDS

Our frame builders may be located in the Far East, but we still decorate the result of their work with the Hamburg coat of arms – as a sign that we are realizing, through incorporating our engineering skills and craftsmanship, a truly coherent product. High-quality frames that are guaranteed to last for years. Functional bikes like the Primera Disc that offer the ideal mix of reliability and fun, in both your everyday commute as well as in your spare time.

NO SMOKE & MIRRORS

The picture shows SHIMANO's new Deore rear derailleur. On the Primera Disc, you'll not only find this eye-catcher but also front derailleur and shift levers of the same quality. This is because our dealers and customers rely on us to always keep an eye on overall performance and longevity – instead of the short-term effect.

Whether you commute with your STEVENS city bike, do the shopping with it, ride to the café – or use it to do all three – is up to you. These bicycles with lightweight aluminum frames and a lot of integrated technology are your reliable companions for agile riding pleasure for daily cruising the city just as for bike rides in the countryside. Specced with low-maintenance hub dynamos with 8 or 11 gears – Super Flight, Boulevard Luxe and Courier Luxe already with noiseless an maintenance-free belt drive. The only thing you need to do is start pedaling ...

CITY

SUPER FLIGHT

FEATURES //

1. CLASSY DESIGN

The connoisseur will appreciate the triple butted aluminium frame with load specific tube shapes from the first moment.

2. STABLE STEERING

Our K1 Superlite fork not only is super-light but also steers super-precisely.

3. FUNCTIONAL SPECS

Well equipped for every-day use and touring - from the sturdy pannier rack to the super-bright lights with stationary and daytime-run function.

4. DRIVEN BY INNOVATION

Extra-smooth combination of Shimano's Alfine 11-speed gear hub and Gates Carbon belt drive.

LOW MAINTENANCE

Since belt drives and 11-speed gear hubs are almost maintenance-free, we consider them to be the perfect choice for daily urban rides. Instead of fiddling with tools and lubes, you can now leave the car in the garage and enjoy the fresh air on your way to work.

MAXIMUM FUNCTION

The heart of our city touring bikes is always a meticulously welded aluminium frame whose tube profiles are designed for high lateral stiffness and low weight. On our top models, cables and lines elegantly disappear into the inside of the frame. This also serves as added protection. Market leader Busch+Müller supplies high-quality lighting systems. Here, for example, is the compact yet very bright (70Lux) IQ-XS headlamp with daytime running light and sensor control.

SUPER FLIGHT

- › Luxury city tourer w/ triple butted aluminum frame, Gates CDX carbon drive and high-quality components
- › Super-light K1 aluminum fork w/ tapered steerer
- › Classy Shimano Alfine 11-speed gear
- › Forged, adjustable dropouts
- › Innovative Busch + Müller headlight (70 Lux!) w/ daylight function and stationary taillight

JUNIOR TOUR

TOUR NEXUS
TOUR NEXUS GIRL
TOUR

We take kids' bikes as seriously as our "big" ones. Therefore, we design them with junior-appropriate geometry with low center of gravity for best handling and lowered weight. Junior Tour models have all the features that are required by law and make all day riding easy and safe: lights, reflectors, fenders, pannier rack. Frames are available from 20" (Tour Nexus) in many attractive color options for girls and boys. These bikes are basically made to encourage kids to ride their bikes with such pleasure that they take this sport with them well into their adult years.

TOUR NEXUS

- › "Offspring every day bike" in wheel sizes 20", 24" and 27.5"
- › Light, compact aluminum frame with low standover height
- › 7-speed gear hub (20": 3-speed) including coaster brake
- › Hub dynamo, LED lights front and rear
- › Pannier rack with spring clamp

ACCESSORIES

GOOD LOOKING AND USEFUL

A STEVENS bike perfectly adjusted to you by your local dealer brings you very close to that ultimate riding experience. Yet, sometimes only the right accessories will make a trip complete. We provide you with selected accessories and little extras, perfectly matched to our bikes to make your all day cycling perfect.

There's the Touring Kit for the X cross series, which enables you to refit your bike with fenders and rack. So your bike doesn't need to have these as standard equipment when you buy it at first. We also want to encourage you to have a look at our leisure wear collection. Here, we can only show you parts of it, so please visit www.stevensbikes.com and click accessories.

TOURINGKIT CROSS 700C

With the optional Touring kit you can make every Stevens X Cross and X Premium model more versatile. SKS fenders will protect you from mud and rain and the rack can transport panniers and other loads of up to 15 kg (33 lbs). Please contact your local STEVENS dealer about price and cost of installation.

KIDS' BIKE KICKSTAND

There is an optional rear kickstand available for STEVENS Kid and Tour models in sizes from 20 to 24". It is easy to install and length adjustable via rotational base. Black scratchproof anodized coating, rubber knob at the base to ensure safe stand.

MINITool MICRO-8

The Micro-8 gives you a compact tool containing the usual hex-keys as well as Phillips- and flat blade screwdrivers that fit most of the bolts on your bicycle.

RACKTIME PANNIER RACKS AND ACCESSORIES

You can upgrade your pannier rack with a spring clamp. The "Clamp it" is available in black or plain stainless steel. Ask your STEVENS dealer which version fits your bike's rack. The spring clamp is only one part of the Racktime system that also includes baskets, bags, child seats and much more. www.racktime.com

CASUAL WEAR

Our hoodies, sweaters, polos and t-shirts are timelessly elegant in shape and color. STEVENS casual wear is kept in subtle black and grey – just like STEVENS allround bikes. Tops convince with clever details like full-length front zipper on our hoodies and many sizes ranging from XS to 2XL. Sweaters, shirts and polos are just a few examples of STEVENS Casual Wear collection. For the whole range please go to the accessory page at www.stevensbikes.de.

DEALER & SERVICE

SERVICE AND GUIDANCE

STEVENS BIKES are only available at the best bicycle dealers whom you can trust 100 %, just as we do! Your STEVENS dealer will support you to choose the right bike to fulfill your wishes and demands. They guarantee that it will fit you in the best way possible, and will hand you a bike that is perfectly assembled and adjusted to fit you. For you, this means a perfectly functional bike for a trouble-free, enjoyable riding experience from your very first pedal stroke. Support your local retailer and buy your new bike where you get comprehensive and personal advice. Even after the purchase, your STEVENS dealer will provide you with continued service and tips about your bike's technology and how to handle it.

TEST RIDE

Take your time for a test ride. You want your new bike to be a companion for many years to come, after all! Try to ride exactly those kinds of routes you wish to use your new STEVENS bike on. Be sure to try other similar models, as well as those cheaper and more expensive, to compare. This way you'll get the most clear overview of our level of technology as well as what your bike has to offer.

MAINTENANCE

By having your STEVENS bike maintained on a regular basis, you will keep it safely rolling for many years. Parts that suffer wear and tear, like chain and brake pads, have to be changed regularly. Gear hubs and suspension forks are subject to specified maintenance schedules.

ACCESSORIES

Your STEVENS dealer offers you all the accessories needed for all day riding, from replacement tubes or locks to floor pumps. Please ask for advice. Your dealer knows all about the most current technologies and knows e.g. how a floor pump and multi-tool can facilitate a cyclist's everyday life or which models suit your needs.

FINE TUNING

If you prefer a certain type of saddle, bar grips or pedals, your dealer can change these parts for you. You can also use a longer or shorter stem to further adjust your seating position to best suit your riding style. In addition, feel free to talk about possible minor componentry changes with your local dealer before the purchase. This kind of service is what defines a dedicated dealer and this translates into extra benefit for you on every ride you go on.

WARRANTY

Should a material defect ever occur, the original owner is protected by the STEVENS warranty for the duration of five years. This comprehensive protection covers all defects in material or workmanship either on the frame or components that bear the STEVENS name, no matter what (frame) material.

BICYCLE LEASING

STEVENS bikes can also be leased. Instead of a car companies can also offer a company bicycle or pedelec to their employees. This also applies to sports bikes. After your employer has given his approval, you chose your favourite STEVENS bike, pay a monthly rate during the leasing period (usually three years) and even profit from a lower price due to tax benefits.

An aerial photograph of a river with a large, dark tree branch protruding from the water. The water is a deep blue, and the surrounding land is a mix of brown and green. The text is overlaid on the left side of the image.
